

Commercial License Policies

The purchase of IVS 3D's Fledermaus software contains certain exclusions and limitations. Those limitations and exclusions are as follows:

- If a dongle is requested, only 1 (one) dongle is allowed per license purchased. If an additional dongle is requested, this indicates the need for an additional license.
- Changes to the initial issue of a Fledermaus license do not take place until the dongle or parallel port is returned to IVS 3D and the License.DAT file is erased. This applies to replacement of a dongle due to failure, or replacement from a parallel port or Ethernet address. If a dongle is misplaced, the user will need to sign an agreement to send the lost dongle once found and erase the License.DAT file in order for IVS 3D to issue a new dongle.
- Fledermaus Professional license includes 1 (one) Reference Manual and 1 (one) Area Based Editing Manual with each license purchase. Additional manuals may be purchased at an additional cost.
- Fledermaus Standard license includes 1 (one) Reference Manual. The Area Based Editing Manual may be purchased at an additional cost.
- Initial purchase of any Fledermaus suite includes 1 (one) year of product maintenance, upgrades and support. After one year, technical support expires but can be renewed for an annual maintenance fee. Non-payment of the annual maintenance fee precludes the user from further version upgrades, updates, patches and technical support. The software version is frozen at the date of maintenance expiration.

“3D Visualization – more than just a pretty picture”
